

During the first part of the term we explore how to get better shots without worrying too much about settings and terminology. We'll look at getting a feel for light and subject plus more confidence handling your camera, whether it's a DSLR or a mobile phone. Terminology and theory comes later.

We'll cover mobile photography and photographing your art, including jewellery, sculpture and paintings.

A more advanced photography focus later in the term takes it up a level and includes an introduction to basic professional, and essential client work requirements.

We have a small studio with lighting equipment and a fully equipped darkroom for developing black and white negatives and printing.

Suitable for all levels.

Content

- * Camera controls, exposure, and post production
- * Darkroom Black and White developing
- * Introduction to digital media and mobile phone photography
- * Photographing your artwork
- * If it is your first term studying photography then we will avoid the technical and emphasize learning how to get good photographs whether on film - automatic or manual or on your mobile phone
